

## When Time Doesn't Heal – Approach to Atypical Wounds

In Australia, the Buruli ulcer most commonly occurs in localised coastal areas of Victoria including Rye, Sorrento, Blairgowrie and Tootgarook on the Mornington Peninsula.

Learn more about this wound, other atypical wounds and appropriate treatment options.

### Speakers

- Dr Angel Lee, Geriatrician, wound specialist
- Meagan Shannon, Skin integrity Clinical Nurse Consultant

### Learning Outcomes

- Identify wounds that have atypical features and determine the most suitable investigations required
- Identify features and clinical course of Buruli ulcer
- Explain the required investigation, treatment options and disease course for any patients with atypical wounds
- Utilise educational reference materials and specialist information to identify effective referral pathways and options to ensure continuity of patient care
